***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-65, drawn to 3D image reconstruction, classified in class 382, subclass 154.
- II. Claims 66-82, drawn to an optical system for generating 3D image data with a lens array, classified in class 359, subclass 619.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because 3D image data for image processing in a network does not have to come from an optical system comprising a lens arrays, a beam splitter and a camera as claimed. The subcombination has separate utility such as 3D projector or display projection system.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
